

SKRETTING AT AQUAFARM 2018

Skretting, the global leader in the manufacture and supply of feeds for farmed fish and shrimp, will attend Aquafarm 2018.

Innovative products and services such as Shield, the new functional feed for seabream, and AquaSIM, an on-line portal for verifying farm performance and optimizing feeding management, will be introduced at Skretting booth.

Skretting will also contribute to Aquafarm program with qualified contributions. Umberto Luzzana, Product Manager, will address the topic “Ingredients or nutrients?”, while Carlos Zarza, Senior Researcher at Skretting Aquaculture Research Centre, will speak about “The role of nutrition in health management strategies for aquaculture”.

Skretting commitment towards sustainability, as described in the Nuterra program, will be highlighted in the round table “Demand and supply meet: how much it is worth to be sustainable?”. The round table has been organized by Skretting in partnership with API and Life Cycle Engineering, and will offer farmers and their customers the opportunity to discuss, with the support of Prof. Carlo Alberto Pratesi from the University of Roma Tre, how sustainability can be a competitive advantage in farmed fish marketing.

Skretting is the world leader in the manufacture and supply of aquaculture feeds, making us an essential link in the feed-to-food chain. We apply our knowledge of ingredients and the nutritional needs of fish and shrimp to develop innovations that achieve optimum nutritional value, sustainable production and economic performance as we seek to fulfil our company-wide mission of ‘Feeding the Future’.
